

Health Solutions

flex[®]

Future, Accelerated.

The demand for advanced medical solutions is growing exponentially. The market dynamics of an aging population, a global increase in healthcare spending, regulation and reimbursement pressures and the industry response to consolidation and restructuring have combined to disrupt one of the largest markets in the world.

The opportunities are massive and staying ahead of the competition requires unrelenting dedication and the experience, capacity and growth to succeed.

Success demands a transformational partner to enable growth, drive innovation and flawlessly execute in the medical industry of tomorrow.

Your growth partner

in the design and delivery of innovative,
life-changing health solutions.

With over 20,000 dedicated designers and engineers worldwide, the world's most advanced manufacturing infrastructure and validated global supply chain network, Flex Health Solutions helps you accelerate growth at unprecedented speed and scale.

Leveraging deep cross-industry expertise, our innovative *Sketch-to-Scale™* system can be accessed across the product lifecycle, providing actionable support and creative insight every step of the way.

From an exclusive pre-validated innovation ecosystem, to expert product development and commercialization strategies, Flex partners with you at any stage to solve challenges for emerging start-ups and global market leaders alike.

Flex Health Solutions is where the future of medical design, engineering and manufacturing sit solidly in line with the expectation that enabling the technologies and devices of tomorrow will improve quality of life and advance healthcare in unimaginable ways.

FLEX DELIVERS

INNOVATION

The energy of new ideas ignites inventiveness and access to core technology supercharges a faster path to results. A proven network of design and engineering talent provides the creative firepower to develop the visionary products and services that world markets demand.

TRANSFORMATION

Flex provides a world of validated services and technologies creating flexible manufacturing ecosystems and scalability with minimal capital expenditures. Cost structures are realigned from fixed to variable while operations are simplified.

FLAWLESS EXECUTION

Dedication to quality assurance guides every decision. Leveraging a proven, validated global quality system and trusted real-time supply chain intelligence, Flex brings the most complex and challenging products to life by adhering to rigorous quality standards.

Working together to deliver

health solutions that are
changing the world.

Flex leverages deep-rooted intelligence from a wide range of industries providing co-innovation and resource reallocation in order to speed time-to-market at any stage of your product's lifecycle.

As your partner in developing tomorrow's most vital medical devices and health solutions, Flex brings business intelligence to ideation, manufacturing confidence to creation and flawless execution to compliance.

FLEX HEALTH SOLUTIONS' AREAS OF FOCUS

MEDICAL DEVICES

From hospital monitors to advanced surgical equipment, Flex will help you build the tools you need. From consumables, such as syringes and catheters, to complex respiratory monitoring equipment, our expertise in medical design, validation, process engineering, manufacturing and precision plastics provides an unparalleled strategic advantage to compete in the medical industry with scale, scope and speed.

DRUG DELIVERY

Biologics manufacturers rely on Flex as a partner for breakthrough solutions. In partnership with many of the leading pharmaceutical companies, Flex designs and manufactures key innovative drug delivery solutions. From pens and autoinjectors, to pumps and inhalers, Flex innovates with our partners to provide end-to-end solutions to the most difficult drug delivery challenges.

DIAGNOSTIC & MEDICAL EQUIPMENT

Flex enables the design and development of the advanced machinery that is changing lives. Our global facilities specialize in the high-mix, low-volume demands of complex medical diagnostics and equipment, from DNA sequencing to diagnostic imaging and monitoring devices. Our team of experts collaborates with our partners across every discipline—including research and development, supply chain, product management, manufacturing and commodity management—helping customers manage complexity without compromising on quality.
